A. The number of minutes a battery can deliver when discharged at a constant rate at $80^{\circ} \mathrm{F}\left(27^{\circ} \mathrm{C}\right)$ and maintain a voltage above $1.75 \mathrm{~V} /$ cell. Capacities are based on peak performance.
B. The amount of amp-hours (AH) a battery can deliver when discharged at a constant rate at $77^{\circ} \mathrm{F}\left(25^{\circ} \mathrm{C}\right)$ for Gel Lines and maintain a voltage above $1.75 \mathrm{~V} /$ cell. Capacities are based on peak performance

C. Dimensions are based on nominal size. Dimensions may vary depending on type of handle or terminal.
D. Dimensions taken from bottom of the battery to the highest point on the battery. Heights may vary depend ing on type of terminal.
E. Terminal images are representative only.

Trojan's battery testing procedures adhere to both BCI and IEC test standards.
